## **New features**

### **Importing data**

*ICE* supports importing data from Excel.

*ICE* gives ability to set data boundaries manually by user.

### **Mathematical model**

Model created in software can be built regardless of the input values number.

### **Output value calculations**

Input values number depends on number of values analyzed by software.

## **Enhancements**

### **Importing data**

*ICE* allows to import with stating both a filename and a filename with extension.

### **Output value calculations**

The prompt asking the user to enter values is made of column names from the Excel file.

## **Bug fixes**

### **Importing data**

There is no distinction between capitalized and non-capitalized import options.
