Release Notes

for version 1.1.0

by Mariusz Malinka

ICE

Table of Contents

New features

CSV file format support

ICE supports importing data from CSV (Comma-Separated Values) file format.

Time-based calculation

ICE allows users to create a mathematical model with data indicated by the hour.

Day-based calculation

ICE allows users to create a mathematical model with data indicated by the day of the week.

Enhancements

File format recognition

The software automatically recognizes the supported file extension. Users can insert file names without the file extension.

Empty rows handling

ICE detects rows with incomplete data and does not consider them while creating a mathematical model.

Bug fixes

Data boundaries correction

ICE correctly imports data according to the inserted boundaries.
